

24/7

threat monitoring

The numbers tell the story

ThreatScan™ is an innovative real-time monitoring system from GE's PII Pipeline Solutions business. It provides pipeline operators with a cost-effective means of guarding against safety and environmental hazards – reliably locating and even anticipating third-party strikes, and determining their severity. ThreatScan's advanced acoustic sensors are easily installed with no excavation. Critical event and location data is immediately transmitted to GE's remote monitoring center for validation and rapid notification (30 minutes or less) to the customer's operations team. ThreatScan is a practical solution, reducing cost with low false-alarm rate and delivering activity reports for effective long-term risk mitigation strategies.
