# Take an Electric Inventory of Your Home!

People didn't always have electricity in their homes. Today, however, our houses have dozens of appliances, toys, and tools that use electricity every day. Take an electric inventory of your house and see just how much we depend on electricity.

Walk through every room of your house and write down all of the things that use electricity. Look carefully—it's easy to overlook some items. Remember to look in closets and storage spaces like the garage.

How often is each item used? Every day or only sometimes? How important is the item to the comfort and happiness of your family? Is there something you can think of that could help conserve the amount of electricity the item uses? (Turning off lights when no one is in the room, for example.)

Record your findings on this sheet. Compare your inventory with others. Did they find items you overlooked? Share your energy conversation ideas with each other.

| Room | Electrical Equipment | How Often It Is Used | Importance to the Family | Conservation Ideas |
|---|---|---|---|---|
