

Keep in Touch with Expertise at our Customer Application Centers

Through hands-on demonstrations, training, educational conferences, technical support and testing, we'll help you determine the optimum solutions for your individual applications. Customer Applications Centers are operated by GE around the globe and strategically positioned to provide you first hand support and services within your region.

Global CAC Locations

Campinas, Brazil (Opening Soon)

Florence, Italy

Houston, USA

Manama, Bahrain

Moscow, Russia

Shanghai, China

Singapore

For more information about our Customer Application Center capabilities please contact your GE Energy representative or visit us at www.ge-energy.com/oc.

Optimization and Control Customer Application Centers

Delivering Technology and Expertise Closer to You

Bently Nevada Asset Condition Monitoring • Control Solutions • Oilfield Technology • Performance and Optimization Software

Service and Expertise...
Delivered closer to you.

With our network of regional Customer Application Centers, GE's industry-leading Optimization and Control technologies are at your fingertips with access to products, services, and experts in your region.

Determine the Optimum Equipment and Services for Your Plant

GE Energy operates several Customer Application Centers (CAC) around the globe to enhance your experience—and familiarity—with innovations that drive safety, efficiency, and reliability throughout the Energy segments.

With this regional CAC network, GE can provide customer-tailored solutions for Bently Nevada Asset Condition Monitoring, Control Solutions, Performance and Optimization Software, and Oilfield Technology. We allow you to gain in-depth understanding of new technology trends within the optimization and control arena by placing these specialized facilities and corresponding application experts closer to you.

Hands-on Experience with GE Energy Experts

Drawing from a comprehensive portfolio of products and services, CAC specialists provide customers the latest information, Best Practices, and up-close experience with key offerings in their region. Examples of regional capabilities include:

- Product demonstrations and training
- Educational programs and conferences
- Custom product training
- Hands-on operation of Optimization and Control technology
- Factory acceptance testing

Refer to supplementary CAC factsheets for specific details at your location.

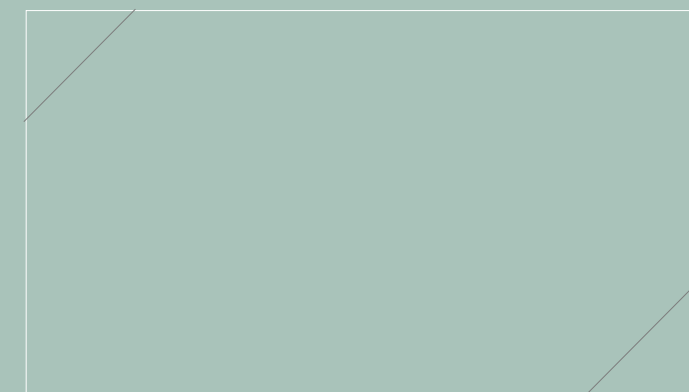

Customer Design and Decision Support

CACs allow customers to become more involved in the selection, testing, and training of Optimization and Control technology—while enjoying expert GE Energy support before and after the selection.

Plant-operation simulation environments allow customers to familiarize themselves with available technologies—and then make the best decision on how to improve the productivity and reliability of their plants.

Customer Applications Served

We serve customers in the power generation, oil and gas, and other industries that rely heavily on rotating machinery in their operations. Along with providing Original Equipment Manufacturers (OEMs), end-users, and Engineering, Procurement, & Construction (EPCs) customers with personal experience on new technology, our global CACs can also provide valuable information on specific customer projects, which can be applied to their Front End Engineering Design (FEED).
