

➤ Trendmaster® Pro System

Capabilities Growing with Acceleration Enveloping, New TIM Types, New Sensors, and More

In the First Quarter 2003 issue of ORBIT (page 60), we announced that the latest generation of our Trendmaster® system had been released with System 1™ software connectivity, new Transducer Interface Modules (proTIMs), and new signal processing hardware. Since that time, we've introduced even more enhancements: new sensors, additional TIM configuration options, a new portable solution for system test/configuration, and acceleration enveloping capabilities. For more information, visit our website where in addition to extensive product information, you'll also find an [advance preview](#) of our informative 18-page Trendmaster Pro overview article coming in next quarter's issue of ORBIT. ☺

➤ Product Manuals

Now Available Online and on CD

While conventional hardcopy manuals are still available from Bently Nevada, our standard method of providing product manuals has now changed to CD. Each CD supplied contains manuals in PDF format for every currently available product from Bently Nevada. A copy of Adobe® Reader® is also contained on the CD, allowing the files to be viewed and printed. In addition, customers with a valid Technical Support Agreement (TSA) can access these manuals on our website (www.bently.com) by entering their TSA number. This online availability ensures that customers will always have instant access to the latest revision of all manuals, and allows any computer with a connection to the world wide web and a printer to access and print our manuals. Customers may print multiple copies of manuals freely using the CD, or by downloading from our website. ☺
