

Rayong Electrical Generating Company (REGCO) of Thailand Recognized for Excellence in Technology Optimization

GE Energy congratulates REGCO for winning the "Excellence in Technology Optimization Award" at the Asian Power Awards 2006 held in Singapore last September. Routinely exceeding availability targets, REGCO attributes their success to their proactive asset management and willingness to involve advanced technology.

In 2000, REGCO selected GE Energy's System 1® optimization and diagnostic software as the foundation of a systematic program to continuously monitor the critical and essential machinery at their Rayong Power Plant. Then in 2005, the system was supplemented with GE Energy's EfficiencyMap™

thermodynamic performance monitoring software. By improving the plant's operational thermal efficiency, REGCO achieved project payback less than a year after commissioning EfficiencyMap.

The Asian Power Awards are organized by the Charlton Media Group, the publishers of Asian Power magazine, and recognize those in Asia's power industry whose efforts stand out.
