GE Energy's 2006 Optimization and Diagnostics Software Users' Conference

With more than 3000 active installations of our System 1® condition monitoring platform and our performance monitoring software packages, we're pleased to announce the creation of a forum that allows our users to share their experiences with one another and with us. Join us in Atlanta, June 27-29, at the Marietta Hyatt Regency Suites for **Unlocking the Potential: 2006 Optimization and Diagnostics Software Users' Conference**.

Designed to facilitate sharing and networking with your peers from around the world, you'll learn about:

- Getting more from your software through powerful educational sessions with product tips and tricks
- How other users are applying their systems in new and innovative ways
- Why and how customers are integrating their systems with other reliability, control, maintenance, and business applications
- Upcoming product upgrades and enhancements

The conference will feature breakout sessions, allowing you to personalize the agenda to your specific product(s) and needs. It's also an opportunity for you to meet the people behind the software, giving you direct access to our developers, and giving us important feedback on how we can continue to improve our products to meet your needs.

To learn more or to register, visit us online at www.ge-energy.com/unlock. You can also call (+1 775.215.2292) or use the Reader Service Card attached to this issue of ORBIT to obtain additional information.
