

Who's Number One in Vibration Monitoring? CONTROL Magazine Readers Say "GE"

For the 16th consecutive year, GE's Bently Nevada* product line has won the Readers' Choice Award in CONTROL magazine's vibration instrumentation category. The awards, published in CONTROL's January 2008 issue, are based on a poll of the magazine's readers who are asked to name the top providers of products and services in a wide variety of categories.

Unlike awards where readers are asked to pick from a list of names, the CONTROL awards are different: readers are given only the category's name (such as programmable controllers), and they must then write

in the name of the provider that they believe to be the leader.

We are honored to be recognized in this way—particularly because the award is based on feedback from a large cross-section of customers, rather than a small editorial staff.

You can read the complete article, along with results from the 2004-2007 Readers' Choice Awards, by visiting CONTROL magazine's website at www.controlglobal.com.
