

Training Fact Sheet

Training

Strap-line

'Keep your staff up-to-date with current integrity management procedures'

Objective

To establish in-house integrity management competence for operators and owners of liquid and gas pipelines.

Scope of Service

Pipeline integrity management is an on-going task of continuous improvement and consequently all staff involved in this process need to have a good understanding of the issues at stake and the necessary skills to carry out the required procedures. Indeed, regulators are now requiring operators to demonstrate that the staff involved in pipeline integrity management are adequately trained.

GE are committed to the development of both their own staff and those of our clients and have a dedicated training department to provide pipeline integrity management training. Among the courses that we offer are the Basic Pipeline Integrity Training Course, the [Pipeline Integrity Management Course](#) and In-Line Inspection and Integrity Training. Through GEIS (GE Inspection Services), we are also able to offer courses on in-field data collection and defect measurement.

Feature of the Service

- Many of our courses have been developed through collaboration with our clients and we can develop courses tailored to your specific needs.
- All courses are delivered by experienced trainers and pipeline integrity management professionals, many of whom lecture on external academic courses in pipeline engineering. (http://www.ncl.ac.uk/marine/postgrad/taught_degrees/pe.htm).
- Training is available on-site or off-site

Benefits of the Service

- Well trained staff are more effective and more highly motivated.
- Effective training fulfils regulatory requirements for competent personnel to make better informed pipeline integrity management decisions.
- The whole organisation benefits from the wider range of skills developed during the training course.
